1 **Wireless Loop Interface XPA-IN-14050-APO**

Wireless Loop Interface (FFS06726036) is connected to the loop and provides communications from the Esmi Sense FDP and FX 3NET fire alarm panel to the wireless devices and vice-versa.

Wireless Loop Interface has an integral LCD which gives information on the state of the wireless devices. The interface transmits and receives signals via the integral aerials which require no adjustment or maintenance.

- Powered from the loop
- A maximum of five interfaces can be connected to a loop
- Up to 31 devices can be logged on to each interface
